

Your Presale Guardian Node, Explained

Why you see vested MIRX, how the new Guardian system works, and what you can do with each release.

THE VALUE DID NOT DISAPPEAR

THE SHORT ANSWER

You are not waiting for a separate 4,000 MIRX lump sum at the end. Your total 4,000 MIRX is opening through the approved vesting schedule, and every released amount belongs to your wallet.

The participation format changed; the 4,000 MIRX value assigned to one presale Full Guardian did not.

1 How your 4,000 MIRX opens

One full month opened at activation. The remaining balance releases daily without a new cliff.

HOW ONE 4,000 MIRX GUARDIAN ALLOCATION OPENS

*Approximation assumes 30-day months; the contract releases continuously according to the approved schedule.

NO SECOND 4,000 MIRX CLAIM

The daily releases are the 4,000 MIRX allocation. After all vesting is complete, the releases add up to 4,000 MIRX; another 4,000 MIRX does not appear afterward.

Each claimable release can be held, sold, or placed into the new MIRX staking system. Vesting continues daily even while a separate amount is staked.

2 Why the Guardian system changed

The 4,000 MIRX entry requirement prevented many holders from participating. The new system allows fractional entry.

OLD EXPECTATION VS. NEW GUARDIAN PARTICIPATION

OLD WHITEPAPER MODEL

4,000 MIRX

required for entry

- One full, indivisible Guardian position
- Fixed 10% annual MIRX yield
- About 1.1 MIRX per day
- Plus a variable PNIC gas-fee share
- All 4,000 MIRX committed together for six months

NEW FLEXIBLE MODEL

ANY MIRX AMOUNT

can enter staking

- 30 / 60 / 90-day choices
- 1x / 1.5x / 2x reward weight
- Earn from both MIRX and PNIC pools
- Released MIRX can be held, sold or staked
- 4,000 MIRX still marks Full Guardian status

WHAT REMAINS SPECIAL ABOUT 4,000 MIRX

Fractional staking opens the rewards system to more people. A 4,000 MIRX position still represents one Full Guardian and remains the benchmark for Full Guardian ecosystem benefits.

The new system separates two choices: you decide how much to stake and for how long; the rest of your vested MIRX remains liquid in your wallet.

3 Why the launch campaign is much stronger

The old 10% base yield has been replaced by two supported reward pools during the Guardian launch campaign.

LIVE GUARDIAN LAUNCH CAMPAIGN

MIRX REWARD STREAM

5,555 MIRX / DAY

shared by weighted MIRX stakes

PNIC REWARD STREAM

500,000 PNIC / DAY

minimum: gas fees + campaign support

30 DAYS

117.4%

1x weight

60 DAYS

176.1%

1.5x weight

90 DAYS

234.8%

2x weight

Live marginal APR estimates observed 10 August 2026. Rates change with pool size, prices and stake weights.

HOW THE PNIC CAMPAIGN WORKS

Normally, the PNIC reward pool follows chain gas fees. During the Guardian launch campaign, Miracle adds support so the pool reaches at least 500,000 PNIC per day.

These are live marginal estimates, not fixed promises. APR changes as MIRX and PNIC prices, total staked MIRX and weighted pool shares change.

4 A simple example for one Guardian buyer

Here is what can happen during the first 90 days under the new system.

ONE PRESALE GUARDIAN = 4,000 MIRX TOTAL

NEW SYSTEM: FOLLOW THE FIRST 90 DAYS

THE SIMPLE TAKEAWAY

You can start earning with the first 666.67 MIRX instead of waiting for all 4,000 MIRX. While that stake earns rewards, more of your allocation keeps unlocking every day.

WHAT '~386 MIRX WORTH' MEANS

This is not a promise of 386 MIRX tokens. It is the estimated combined value of MIRX and PNIC rewards at the live 90-day campaign rate on 10 August 2026. The actual value can move up or down.
